

CalCCA 2018 Annual Meeting

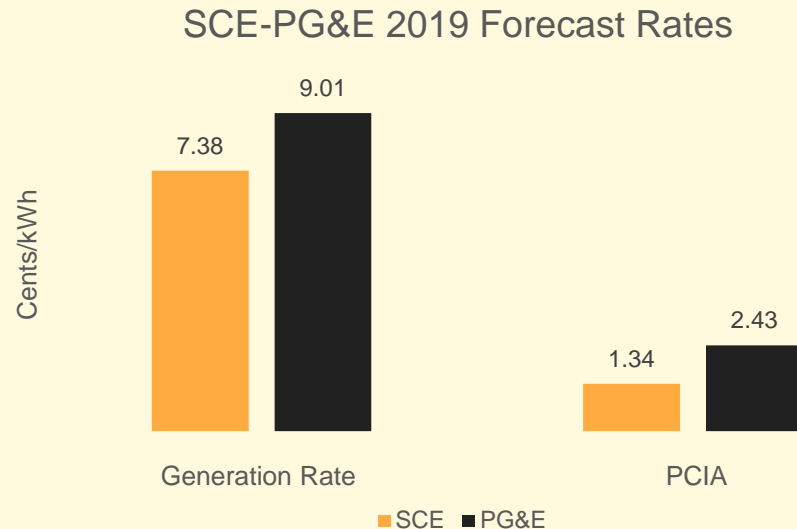

Clean Power Alliance overview

- Clean Power Alliance will soon serve approximately one million customer accounts across 31 communities in Southern California
- CPA already serves over 30,000 customer accounts with the remaining to be brought on by May 2019
- CPA offers three competitive rate offerings at 36%, 50% and 100% RPS tiers, with a default chosen by each community
- In 2019, CPA's overall RPS deliveries will exceed 55% at GHG intensity lower than SCE

PCIA: a Southern California perspective

- SCE rates have historically been less than PG&E rates

- CPA has assumed a competitive environment with modest cost savings compared to SCE rates
- The APD further compresses margins with negative impacts on CPA's ability to achieve its goals, including
 - Voluntary action to reduce GHG emissions well beyond minimum compliance requirements
 - Programs to benefit low income customers (CARE customers eligible for 100% RPS at parity rate with SCE in some areas)
